Frame grounded by connection of grounding wire to neutral wire. If used in the new branch circuit installation (1996 NEC) or if local codes do not permit grounding through neutral wire, open the connection and use the grounding wire to the ground unit in compliance with local codes.

Connect the neutral wire to the branch circuit's neutral conductor in the usual manner:

- Disconnect the ground from the neutral at the free end of the conduit.
- Use the grounding terminal or lead to ground the unit.
- Connect the neutral terminal or wire to the branch circuit neutral in the usual manner.

This appliance is manufactured with a green or green-yellow ground wire connected to the oven chassis.

U.S. Installation only / 3-wire branch circuit

See diagram. Where local codes allow the connection of the ground wire from the oven to the power supply cable neutral wire (white wire):

- The ground wire must be connected first;
- If local codes permit, connect the green or yellow-green ground wire from the appliance and the white wire from the appliance to the power supply neutral wire (white wire).
- Connect the red and black leads from the appliance to the matching color wires in the junction box using UL/CSA listed wire connectors.

U.S. and Canada installation / 4-wire branch circuit

- Separate the green or yellow-green wires from the white wires that extend out of the end of the appliance cable.
- The ground wire must be connected first;
- Connect the green or yellow-green ground wire from the appliance to the ground wire in the junction box (green colored wire) using UL/CSA listed wire connectors. Do not connect the grounding wire to the neutral wire in the junction box.
- Connect the red and black leads from the appliance to the matching color wires in the junction box using UL/CSA listed wire connectors.
- Connect the white wire from the appliance to the neutral white wire in the junction box using a UL/CSA listed wire connector.
